DETAILED ACTION

Election/Restrictions

1. Claims 4-9 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in Paper No. 6.

Drawings

2. The drawings are objected to because figure 4 labels the substrate "100" while the specification refers to it as "200" on p.10. A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Specification

3. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the

Art Unit: 2826

applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

5. Claims 1 and 3 are rejected under 35 U.S.C. 102(e) as being anticipated by Kanamori (USPN 6,414,346).

6. In reference to claims 1 and 3, Kanamori (USPN 6,414,346) discloses a similar device. Figure 5 of Kanamori illustrates a memory device layout. Kanamori makes it clear that the layout can be a mask rom (column 12, lines 26-29). Figure 5 of Kanamori illustrates a substrate with memory cell array region (2, labeled with a vertical arrow) and a segment select region (3, two regions are shown and are labeled with a vertical arrow as well). There are first and second trenches (9) at the outer portion of the memory cell array region (2) and an outer portion of a buried layer formation region of the segment select region (3). This can be seen at the location of the segment select transistors Trs1 and Trs2. The first and second trenches (9) are filled with an insulating material or element isolating material or an isolating pattern (column 9, lines 8-12). There is a plurality of buried layers (4, 5) aligned on the substrate in a first direction by a predetermined interval and surrounded by the isolating pattern (9). There is a plurality of gates (8) aligned in a second direction to cross the buried layers (4,5) in an orthogonal direction. Figure 13 makes it clear that a protective or insulating film (13) covers the whole substrate and the gates (8).

Claim Rejections - 35 USC § 103

7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

8. Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Kanamori (USPN 6,414,346).

9. With regard to claim 3, Kanamori teaches all of the claimed invention except for the exact dimension of the trench. Although the Kanamori device does not teach the exact dimension of the trench as that claimed by Applicant:

The shape, size, dimension differences are considered obvious design choices and are not patentable unless unobvious or unexpected results are obtained from these changes. It appears that these changes produce no functional differences and therefore would have been obvious. Note In re Leshin, 125 USPQ 416.

10. Therefore claim 3 is not patentably distinguishable over the Kanamori reference.
